***DETAILED ACTION***

***Response to Amendment***

1. Applicant's amendment filed on 2/4/10 has been entered.

Claims 11-20 are new.

Claims 1-20 are pending in the application.

In response to applicant's submission of Replacement Drawings filed on 2/4/10, the objections are withdrawn.

***Response to Arguments***

2. Applicant's arguments filed on 2/4/10 have been fully considered and persuasive (see page 10- 17, of the remarks filed on 2/4/10. The rejection under 112, second paragraph and 35 U.S.C. 102(e) is withdrawn and claims 1-20 are now allowed.

***Reasons For Allowance***

3. The following is an examiner's statement of reasons for allowance:

Claims 1-20 are allowed and renumbered as 1-20.

The prior art of record Kwak et al., (US. 6,934,245) discloses an apparatus and method for determining whether transmit diversity is used by a signal transmitted over a primary common control physical channel (P-CCPCH), a downlink channel. Kwak does not output an interleaved sequence of symbols. In addition, Applicant respectfully submits that Kwak clearly differs from the recited claims by teaching the use of separate derotators for normal and Tx Diversity mode. One of Kwak's derotators treats a first signal (Fig. 5: 523), while the second derotator, in Tx Diversity mode, treats a second

Art Unit: 2624

signal (Fig. 5: 524) . Consequently, Applicant respectfully submits that Kwak teaches away from using a single derotator, a unique functional block that behaves differently depending upon whether it uses a normal or Tx Diversity mode. Applicant further submits that the use of a single derotator provides a considerable advantage in terms of hardware components compared to Kwak's use of two blocks for normal and Tx Diversity, (as recited in claims 1 and 7); "a Primary Common Control Physical Channel (P-CCPCH)...processor block that receives despread symbols and processes the despread symbols; a first derotator block that receives the processed symbols from the P-CCPCH processor block, wherein the first derotator block further comprises: a pilot derotator sub-block that operates only on pilot symbols within the processed symbols from the P- CCPCH processor block and produces a first signal wherein non-pilot symbols are unaltered, a general derotator sub-block that receives the first signal from the pilot derotator sub-block, applies different weights to the processed symbols from the P-CCPCH processor block based upon whether a transmission mode is closed loop, and produces a second signal; and a second derotator block that receives the second signal from the general derotator sub-block, performs switching operations based upon whether the transmission mode is Space Time coding based Transmit Diversity (STTD), and produces an output signal" (as recited in claim 11), as commonly included in the independent claim 1 , 7 and 11, the prior art of record fails to teach either singularly or in combination, fails to anticipate or render the above limitations obvious. Claims 1- 20 have been withdrawn from the rejection and are allowed.

Art Unit: 2624

4. Any comments considered necessary by applicant must be submitted on later than the payment of the issue fee and to avoid processing delays should preferably accompany the issue fee. Such submissions should be clearly labeled, comments on statement of reasons for allowance.
